# THE CONCEPTUALISATION THAT ENCOMPASSES THE LEADERSHIP FRAMEWORK

**The Leadership Framework is a set of competencies that are at the heart of leadership development at ISL and Smart Leader Diagnostics. The framework is subsumed by the seven key leadership capabilities that each leader needs to demonstrate for them to lead effectively.**

1. Role Model
2. Influencer
3. Motivator
4. Team Builder
5. Change Champion
6. Business Savvy
7. Strategic Thinker

Each of these key competencies are further defined and measured **in the 063 | 360° psychometrics tool** by eight behavioural characteristics that apply to leaders at all levels of management (with the exception of Strategic Thinking that is applicable for senior leaders). All-in-all, there are fifty-six measures that underpin the Framework and are measured in the 063 | 360° Profiler deployed by ISL and Smart Leader in the Leader Performance Dashboard.

Leaders at each level demonstrate these competencies within a different context. For example, all leaders are responsible for influencing others. At the Team Leader level this includes their team members,

their leader, peers and the others with whom they interact. At the Lead Organisation level, this extends to strategic relationships across external stakeholder groups (e.g. central government, industry groups, and strategic partners). The Leadership Framework aligns well with the values of ISL clients, and serves to support those organisations to achieve their purpose, vision, and strategic goals.

It is critical that leaders, at all levels, can articulate the purpose and vision of their team so that team members can see the part they play in achieving the team mission and gain a sense of personal purpose and meaning.
